# STATE: ORISSA

# **Contingency Plan for District: ANGUL**

1.0 D	istrict Agriculture profile							
1.1	Agro-Climatic/ Ecological Zone							
	Agro Ecological Sub Region (ICAR)	Gujurat Hills, Dandakaranya & Eastern Ghats hot moist sub-humid eco-subregion (12.1)						
	Agro-Climatic Region (Planning Commission)	Eastern Plataeu & I	Hill region (VII)					
	Agro Climatic Zone (NARP)*	Mid central table lar	nd zone (OR-10)					
	List all the districts failing under the NARP Zone	Angul, Dhenkanal, parts of Cuttack,& Jajpur						
	Geographical coordinates of district	Latitude	Longitude	Altitude				
		20 <sup>0</sup> 49'52.00' N	85 <sup>0</sup> 05'50.00" E	440 m				
	Name and address of the concerned ZRS/ ZARS/ RARS/ RRS/ RRTTS	RRTTS, Mahisapat, Dhenkanal						
	Mention the KVK located in the district	Kishi Vigyan Kendr	ra, Panchamahala, P.O Hulurisingha,	Dist. :- Angul759132 (ODISHA)				
1.2	Rainfall	Average (mm)	Normal Onset (specify week and month)	Normal Cessation (specify week and month)				
	Summer (Jan-March)	64.0	2 <sup>nd</sup> week January	1st week of February				
	Pre-monsoon (Apr-May)	80.1	3 <sup>rd</sup> week May	4 <sup>th</sup> week of May				
	Monsoon (June-Sep)	1147.8	2 <sup>nd</sup> week of June	4 <sup>th</sup> week of September				
	Post-monsoon (Oct-Dec)	110.0	2 <sup>nd</sup> week October	3 <sup>rd</sup> week of November				
	Annual	1401.9	-	-				

<sup>\*</sup> If a district falls in two NARP zones, mention the zone in which more than 50% area falls Source: Orissa Agriculture statistics 2008-09

1.3	Land use pattern of the district (latest statistics)	Geographical area ('000 ha.)	Cultivable area ('000 ha.)	Forest area ('000 ha.)	Land under non- agricultural use ('000 ha.)	Permanent pastures ('000 ha.)	Cultivable wasteland ('000 ha.)	Land under Misc. trees and groves	Barren and uncultivable land ('000 ha.)	Current fallows ('000 ha.)	Other fallows ('000 ha.)
	Area ('000 ha)	638.0	191.0	272.0	48.0	36.0	19.0	23.0	7.0	25.0	17.0

.4 Major Soils	Area ('000 ha)	Percent (%) of total
Red loam	70.496	32.2
Clay & heavy clay soil	62.24	28.4
Medium textured red loam	34.69	15.8
Black Soil	29.10	13.3
River valley alluvial	17.21	7.9
Others (specify):	5.26	2.4

1.5	Agricultural land use	Area ('000 ha)	Cropping intensity %
	Net sown area	191	168
	Area sown more than once	130	
	Gross cropped area	321

# 2.5 Contingent strategies for Livestock, Poultry & Fisheries

## 2.5.1 Livestock

Drought	Suggested contingency measures		
	Before the event	During the event	After the event
	Livestock insurance		Availing insurance
Feed and fodder availability	<ul> <li>Encourage perennial fodder production on river beds and tank bed on community basis.</li> <li>Village gauchar (grazing) lands should be developed for fodder production.</li> <li>On boundaries of agricultural field trees or shrubs like Sesbania, Subabul, Neem etc should be planted.</li> <li>It is essential to establish fodder bank near forest areas. Provision is also necessary to store surplus crop residues in fodder banks, which can be made available during draught.</li> <li>Excess fodder in flush season can be preserved as hay/silage.</li> <li>Explore the possibilities of availability of unconventional / alternative feed</li> </ul>	<ul> <li>Utilizing fodder from perennial trees and fodder bank reserves.</li> <li>Transporting excess fodder from adjoining districts.</li> <li>Utilizing the existing crops which fail to grow adequately due to failure of monsoon for feeding of animals.</li> <li>Use of unconventional livestock feed such as sugar cane top, sugar cane bagasse, banana plant Crop residues such as cassiatora water hyacinth and other like tree pods and seeds etc. Improving poor quality roughages by ammonia treatment, urea treatment, urea molasses mineral block etc and feeding them.</li> </ul>	Supplementary feeding of remaining livestock and the replacement stock.

Drinking water	resources during draught.  Organizing training programme of persons connected with A.H. on feeding and management of animals during draught.  Preserving water in community tanks and ponds etc for drinking purpose by excavation and sanitization of these resources. In addition, wells (bore wells or dug wells) may be constructed ahead of possible event of draught.	Water sources of Temples, Churches, Gurdwaras, Jain temples and Maszids are generally ideal sources during draught.	Culling of unproductive livestock
Health and disease management	Veterinary preparedness with vaccine and medicines.	<ul> <li>Conducting animal health camps and treating the affected animals</li> <li>Supplementation of mineral and vitamin mixtures</li> </ul>	Proper disposal of dead animals
Floods			
Feed and fodder availability	Keeping track of weather forecast and prior information through radio and TV Etc.	<ul> <li>Procured feeds and fodders should be fed to all animals on the order of priority of animals.</li> <li>Straws and stover that got soaked during floods need not be thrown away out right. They can be fed to animals as long as rotting or fungal growth has not set in. Partial drying choffing and sprinkling concentrate mixture can improve intake and utility.</li> </ul>	Provision of supplementary feeding (concentrate / Roughage) with vitamin & minerals.
Drinking water	Drinking water be made available to the animals in any kind of clean container available with the farmer.	<ul> <li>Priorities animals as suckling animals, suckling animals along with their nursing mothers, producing and working animals, sick and old animals, adult open and non-producing animals as the feed and water may be in short supply.</li> </ul>	Provision of clean drinking water.

Health and disease management	Temporary relief camps on spots can be set up at short notice to provide shelter to animals on roads, railway line embankments, other earthen embankments, low hillocks, upland etc.      Variation of livestock before onset of rainy season	<ul> <li>There should be one veterinarian with 3 to 4 village to work with the help of local volunteers.</li> <li>The team should be well equipped with contingent items like bandages, tourniquet ropes, controlling rope, splints, slings, poles and ropes to lift animals. Drugs including painkillers, antiseptics, antibiotics, anti-venom and anti-shock drugs etc. should be adequately available with them.</li> </ul>	<ul> <li>Prompt and appropriate attention to injuries by providing necessary medicines to the livestock owners.</li> <li>Vaccination campaign against common endemic diseases of the areas (like H.S. B.Q, Anthrax etc.) must be taken up urgently. Necessary steps should be taken for the control of non-specific digestive and respiratory infections in consultation of local veterinary personals.</li> <li>Improving shed hygiene especially in the farmers household through cleaning and disinfection</li> </ul>
Cyclone			
Feed and fodder availability	Training to the farmers about care of their animas when catastrophe strives, so that they are prepared for the situation. Preparation and distribution of leaflets or booklets in simple local language for care of livestock in disaster.	<ul> <li>Procured feeds and fodders should be fed to all animals on the order of priority of animals.</li> <li>Straws and stover that got soaked during floods need not be thrown away out right. They can be fed to animals as long as rotting or fungal growth has not set in. Partial drying choffing and sprinkling concentrate mixture can improve intake and utility.</li> </ul>	Provision of supplementary feeding (concentrate / Roughage) with vitamin & minerals.
Drinking water	-	<ul> <li>Priorities animals as suckling animals, suckling animals along with their nursing mothers, producing and working animals, sick and old animals, adult open and non-producing animals</li> </ul>	<ul> <li>Provision of clean drinking water.</li> </ul>

Heat wave and cold	wave		
Shelter/environmen t management	<ol> <li>Green cover (trees plantation, land scaping)</li> <li>Cooling devices: fans, wet curtains or panels, air cooler if possible.</li> </ol>	Proper sheltering / housing white painting outside the roof and black painting inside the roof.  Washing / wallowing / sprinkling/ splashing / showering  Provision of cool drinking water (in earthen pitches)	<ol> <li>Feeding Green fodder/ silage/ hay</li> <li>Provision for night feeding</li> <li>Grazing only if green pastures/ grass lands available</li> <li>Graze early in the morning and late in the afternoon</li> </ol>

## 2.5.2 Poultry

Drought	Suggested contingency measures		
	Before the event	During the event	After the event
Shortage of feed ingredients	Ensure procurement of feed ingredients sufficient ahead	Feed supplementation will be made to the farms	Attempt will be made for available of feed ingredient or compound feed to the farmers
Drinking water	Check water source for ensuring sufficient portable water during draught	Attempt will be made to provide sanitized drinking water	Availability of water will be ensured by digging of bore well
Health and disease management	Procurement of vaccines and medicines and antistress agent.  Feeding antibiotics	Continue feeding of antistress agent	
	Procurement of litter materials		
Floods			
Shortage of feed ingredients	Ensure procurement of feed ingredients / compound feed sufficient ahead as feed supply	Supply the compound feed to the poultry	Supply will continued till the

	to the farm will hamper due to submergence of the connecting roads	farm under submerged area	situation is under control
Drinking water	Protect the water sources from submergence	Attempt will be made to provide sanitized drinking water	Water sources will sanitized with bleaching powder or any water sanitizer
Health and disease management	Procurement of vaccines and medicines.  Feeding antibiotics  Procurement of litter materials	Continue feeding antibiotics  Prevent entrance of flood water to the shed  Replace wet litter  Proper disposal of dead birds if any	Disinfection of the farm premises.  Feeding antibiotics And deworming.  Replace wet litter  Disinfection of sheds. Proper
Cyclone Shortage of feed ingredients	Procurement of feed	Supply the compound feed to the poultry farm under cyclone affected area	Supply will continued till the situation is under control
Drinking water	-	Attempt will be made to provide sanitized drinking water	Water sources will sanitized with bleaching powder or any water sanitizer
Health and disease management	Procurement of medicine and vaccine	Vaccination of birds against different diseases  Provision should be made for available of sanitized water	Water sources will sanitized with bleaching powder or any water sanitizer
Heat wave and cold wave		1	l

Shelter/environment management	Pruning of big trees in the farm.  Putting curtains on open sides of the shed.  Procurement of electrical accessories  Providing shed to poultry houses.  Providing proper ventilation.	Attempt will be made for cooling of poultry shed by adapting different cooling methods  Thickness of litter should be reduced  Ventilation to the house should be increased by providing ceiling fans and exhaust fan	Provision should be made to ensure proper ventilation to the house
Health and disease management	Procurement of Anti stress drugs	Supplementation of anti stress drug	Vaccination of birds against RD
Cold Waves			
Health and disease management	Procurement of Anti stress drugs and vaccine	Feeding of anti stress drugs in drinking water Vaccination with fowl pox	Vaccination against IBD and RD
Shelter and environment management	Procurement of curtains to cover open sides of the shed.  Heating arrangement kept ready	Close the open sides of the shed by curtain in such a way that ventilation should not be hampered.  Provide heat if necessary depending on the temperature and age of the birds	Remove the curtains.  Discontinue heating.

# 2.5.3. Fisheries/ Aquaculture:

	Suggested contingency measures		
	Before the event	During the event	After the event
Drought	<u> </u>		
A. Capture			
Inland			
(i) Shallow water depth due to insufficient rains/ inflow	Restricted release of water from reservoir.     Supplementary water harvest structures like pond and tanks has to be developed.     Renovation and maintenance of existing water harvest structures.	-	-
(ii) Changes in water quality	1. Prepare to release water into the habitat.	1. Mixing of water from the water harvest structure like ponds and tanks into the fish habitat.	Monitoring the water quality and health of aquatic organisms.
B. Aquaculture			
(i) Shallow water in ponds due to insufficient rains/ inflow	Building deep ditches in culture ponds for shelter of the fish to over come high temperature	<ol> <li>Recharge the ponds with bore well water or water from other sources.</li> <li>Partial harvesting of the stock to reduce stocking density.</li> <li>Artificial shelter by putting aquatic floating weeds in 1/3<sup>rd</sup> area.</li> </ol>	-
(ii) Impact of salt load build up in ponds/ change	Application of organic manure in culture system	1. Recharge the ponds with bore well water or water from other	1. Application of organic manure in culture system

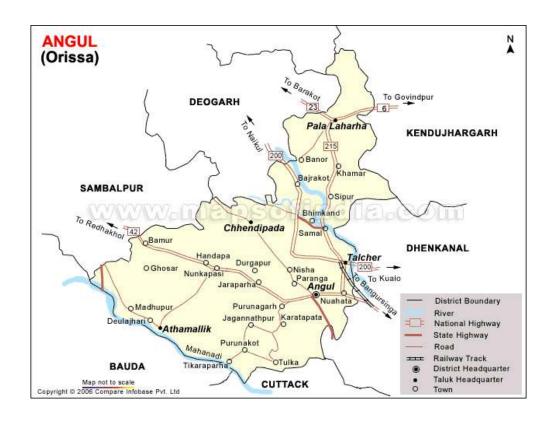

in water quality		sources	
2) Floods			
A. Capture			
Inland			
(ii) No. of boats / nets damaged	The boats has to be secured safely to river/ reservoir banks.  Non operation of fixed bag nets in streams and rivers.  Insurance coverage for nets and boats.	Checking of the safety of the boats / nets.  An inventory logbook with name of crewmembers should be maintained.  Number of crew and load should be much below the marked tonnage.	Maintenance of the boats and nets.  Assessment and settlement of insurance.
(iii) No. of houses damaged	Insurance coverage for houses.	-	Settlement of insurance.
(iv) Loss of stock	-		Assessment of stock (fish population) and replenishment if stock is depleted. Habitat restoration for the stock remaining.
(v) Changes in water quality			Application of lime in tanks.  Application of fertilizer.
(v) Health and diseases			Observation of the health status of fish and accordingly control measure should be taken. Control on transport of brooders and seeds
B. Aquaculture			
(i) Inundation with flood	Strengthening and increase in dyke height The should be constructed with inlet and out	Net enclosure should be provided over the dyke to prevent the escape	Repairing and strengthening of dyke if required.

water	let facility.	of fish from pond.			
(ii)Water contamination and changes in water quality	Application of lime.	-	Application of lime and geolite. Application of Alum. Application of KmnO4		
(iii) Health and diseases	Application of lime		Application of lime and KmnO4. Assessment of the health status of fish and accordingly control measure should be taken. Control on transport of brooders and seeds.		
(iv) Loss of stock and inputs (feed, chemicals ets)	Strengthening and increase in dyke height.  Before flood the stock should be harvested and sold in flood prone areas.  Transport of feed and chemicals to safer place.  Purchase of feeds and chemicals on weekly or fortnightly basis.  Insurance coverage for stock.	Net enclosure should be provided over the dyke to prevent the escape of fish from pond.  Water should be diverted from the main stream.  Sand bags cam be used for protection of dykes.  Storing of feed and chemicals to safer place.	Stock assessment and restocking with advanced fingerlings or yearling if required. Repairing of dykes. Assessment of quality of feed and fertilizer. Assessment and settlement of insurance.		
(v) Infrastructure damage (pumps, aerators, huts etc.)	Construction of flood shelter for pumps, aerators etc.	-	Repairing of pumps, aerators if required. Repairing of damaged hut.		
Cyclone/ Tsunami	Cyclone/ Tsunami				
A. Capture					
Marine					
(i)Average compensation paid due to loss of fishermen lives	Repeated broadcast and telecast of warning. Sea venture should be avoided Insurance coverage for lives of fishermen.	Provision of relief Evacuation of people to safer areas.	Assessment and settlement of insurance.		

(ii)Av. No. of boats / nets damaged	The boats has to be secured safely to river/reservoir banks. Insurance coverage for nets and boats.	Checking of the safety of the boats / nets. An inventory logbook with name of crewmembers should be maintained.	Maintenance of the boats and nets.  Assessment and settlement of insurance
(iii)Avg.No. of houses damaged	Insurance coverage for houses.	-	Settlement of insurance.
Inland	<u> </u>		
B. Aquaculture			
(i) Over flow/ flooding of ponds	Strengthening and increase in dyke height. The should be constructed with inlet and out let facility.	Net enclosure should be provided over the dyke to prevent the escape of fish from pond.	Repairing and strengthening of dyke if required.
(ii) Changes in water quality (fresh water / brackish water ratio)		-	
(iii) Health and diseases	-		Application of lime and KmnO4. Assessment of the health status of fish and accordingly control measure should be taken. Control on transport of brooders and seeds.
(iv) Loss of stock and inputs (feed, chemicals ets)	Strengthening and increase in dyke height.  Transport of feed and chemicals to safer place.  Insurance coverage for stock.	Net enclosure should be provided over the dyke to prevent the escape of fish from pond. Storing of feed and chemicals to safer place.	Stock assessment and restocking with advanced fingerlings or yearling if required. Repairing of dykes. Assessment of quality of feed and chemicals. Assessment and settlement of insurance.
(v) Infrastructure damage (pumps, aerators,	-		Repairing of pumps, aerators if required. Repairing of damaged hut.

shelters/ huts etc.)			
sherers, hars etc.)			
Heat Wave and Cold Wav	ve		
A. Capture			
Marine	_	During hot waves night fishing	_
Within	_	should be done.	_
Inland		During hot waves preservation by	
		cold chain should be increased.	
B. Aquaculture		cold chain should be increased.	
(i) Change in pond	During hot waves adequate water depth	During hot waves mixing of water	-
environment	should be maintained.	with fresh water should be done.	
		The culture system should be	
		provided with aeration to avoid	
		oxygen depletion due to high	
		temperature during hot waves.	
		Partial harvesting can be done to	
		avoid loss of crop.	
(ii) Health and disease	Application of lime and turmeric.	Feeding should be stopped.	Application of CIFAXto contro EUS disease in
management		If cold waves persists EUS	fish.
		outbreak takes place
