## 2.0 Strategies for weather related contingencies

### 2.1 Drought

# 2.1.1 Rainfed situation (100 per cent area is irrigated)

Condition			Suggested	d Contingency measures	
Early season	Major Farming	Normal Crop / Cropping	Change in crop / cropping	Agronomic measures	Remarks on
drought (delayed	situation	system	system including variety		Implementation
onset)					
Delay by 2 weeks			37.1		
(Specify month)*			NA		

Condition			Suggested Contingency measures				
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation		
Delay by 4 weeks (Specify month)			NA				

Condition		Suggested Contingency measures				
Early season drought (delayed	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation	
onset)	Situation	system	System		Implementation	
Delay by 6 weeks (Specify month)			NA			

Condition			Sugge	sted Contingency measure	es
Early season drought (delayed onset)	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delay by 8 weeks (Specify month)			NA		

Condition		Suggested Contingency measures					
Early season drought (Normal onset)	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation		
Normal onset followed by 15-20 days dry spell after sowing leading to poor germination/crop stand etc.			NA				

Condition			Suggested Contingency measures				
Mid season drought (long dry spell, consecutive 2 weeks rainless (>2.5 mm) period)	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation		
At vegetative stage			NA				

Condition		Suggested Contingency measures				
Mid season drought (long dry spell)	Major Farming situation	Normal Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation	
At flowering/ fruiting stage		J	NA	measures		

Condition			Suggest	ed Contingency measures	
Terminal drought (Early withdrawal of monsoon)	Major Farming situation	Normal Crop/cropping system	Crop management	Rabi Crop planning	Remarks on Implementation
			NA		

### 2.1.2 Drought - Irrigated situation

Condition			Suggeste	d Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Delayed release of water in canals due to low rainfall	Tube well irrigated alluvial soils	Paddy Maize Wheat Rapeseed and Mustard	Long duration paddy var. should be replaced with short duration varieties (PR-115) and basmati rice (Pusa Basmati-1, Pusa 1121, Punjab Basmati-2, Punjab Mehak)	<ul> <li>Direct seeding of paddy and laser land leveling should be done which saves 20-25% irrigation water</li> <li>Zero till sowing of Raya which saves irrigation</li> </ul>	Pun seed, NSC, P A U and progressive farmers.
				water	

Condition			Suggested	Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Limited release of water in canals due to low rainfall	Tubewell irrigated alluvial soils	Paddy Maize Wheat	Should be replaced with basmati rice, maize. wheat, oilseeds	Direct seeding     of paddy and     laser land	Pun seed NSC, P A U and Progressive farmer

Condition			Suggeste	d Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
		Rapeseed and Mustard	maize ( PMH 2 and JH 3459), soybean (SL 744 and SL 525)	leveling should be done which	
		Summer Moong	toria (PBT 37) raya (PBR 210 and PBR 97) gobhi sarson (PGSH 51 and GSL 2) laced with oilseeds	saves 20-25% irrigation water  • Bed planting of summer Moong (67.5×37.5 cm) which saves 20-30% irrigation water	

Condition			Suggested	l Contingency measures	
	Major Farming	Normal Crop/cropping system	Change in crop/cropping	Agronomic measures	Remarks on
	situation		system		Implementation
Non release of water		Paddy	Maize (PMH 2 and JH 3459),	Bed planting of Soybean	Punseed, N S C,
in canals under	Tube well irrigated	Maize	soybean (SL 744 and SL 525)	and Maize laser land	PAU and
delayed onset of	alluvial soils	Wheat	moong varities like ML-267 and	leveling should be done	Progresive
monsoon in			ML-613 can be grown	Which saves 20-25%	farmer
catchment		Rapeseed and Mustard		irrigation water	

Condition			Sugges	ted Contingency measures		
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation	
Lack of inflows		·		·		
into tanks due to						
insufficient	NA					
/delayed onset of						
monsoon						

Condition			Sugg	gested Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
Insufficient groundwater recharge due to low rainfall	Tubewell irrigated alluvial soils	Paddy Maize Wheat Rapeseed and Mustard Summer moong	No change	<ul> <li>Laser land leveling should be done which saves 20-25% of irrigation water</li> <li>Wheat can be sown with Happy seeder technology immediately after harvesting of paddy which saves pre sowing irrigation</li> <li>Summer moong can also be sown with Happy seeder technology.</li> </ul>	Punseed, N S C, P A U and Progresive farmer

## **2.2 Unusual rains (untimely, unseasonal etc)** (for both rainfed and irrigated situations)

Condition	Suggested contingency measure					
Continuous high rainfall in a short span leading to water logging	Vegetative stage	Flowering stage	Crop maturity stage	Post harvest		
Paddy	Drain away the excess water	Drain away the excess water	Drain away the excess water			
Maize	Drain away the excess water and spray 6kg urea/acre in two sprays at weekly interval or broadcast additional nitrogen @ 25-50 kg urea per acre after flooding is over	Do not allow the rain water to stand in the main crop as this crop is highly sensitive to standing water and				

		promotes bacterial stalk rot		
Wheat				Store new grains in clean godowns or receptacles. Plug all cracks, cervices and holes in the godowns thoroughly. Disinfest old gunny bags by dipping them in emulsion of 6 ml Sumicidin 20EC or 5 ml Cymbush 25 EC in 10 litres of water for 10 minutes and dry them in shade before filling with grains or use new gunny bags.
Summer moong	Sowing of summer mungbean should not be delayed after 3 <sup>rd</sup> week of April otherwise it will result in yield loss if heavy rains comes at maturity			
<b>Horticulture crops</b>			1	
Mango		Drain out excess water		
Kinnow (Mandarin)				
Guava				
Crop4				
Crop5				
Heavy rainfall with	high speed winds in a short span			,
Wheat			Do not irrigate on windy or stormy days	
Rice	Avoid early planting of rice to keep the incidence of bacterial leaf blight under check.			
Maize	Trench sowing of maize resists lodging			
Horticulture				

Crop1 (specify)	The excess rain water when stagnates for several days is harmful to the orchard trees. Adopt prompt measures to drain out excess water.			
Outbreak of pests	and diseases due to unseasonal rains			
Rice		Blight develops more in high humid conditions. Farmers should not allow stagnation of water in the fields.	If high humidity and cloudy weather prevails the crop may be sprayed with blitox/ copper oxychloride 50 WP @ 500 g in 200 litres of water/acre to control false smut and after 10 days of its application spray Tilt @ 200 ml/acre in 200 litres of water. Start the spray at the boot stage.	
Maize	Brown stripe downy mildew: Keep the field well drained spray indofil M-45 @ 200 g /using 100 lit of water per acre after fortnight of sowing	Bacterial stalk rot of maize: Keep the fields well drained and destroy the diseased plant debris		
Wheat		Grow yellow rust resistant varieties	Spray of tilt 1 ml/1 lit of water for one hectare.	Do not grow PBW 343
Horticulture				
Crop1	In case of occurrence of root damage due to water stagnation in pear, peach etc. apply 10 g bavistin 50 WP + 5 g vitavax 75 WP in 10 litres of water along the trunk after draining out the excess water and drying of soil. Prune the dried ends of the branches alongwith 5-8 cm of the live wood.			
Mango				

Citrus		
Guava		

### 2.3 Floods: In general there are no floods

Condition	Suggested conting	gency measure	
Transient water logging/ partial inundation Seedling / nursery stage	Vegetative stage	Reproductive stage	At harvest
Rice			
Wheat			
Maize			
Horticulture			
Mango			
Citrus			
Guava			
Continuous submergence			
for more than 2 days			
Rice			
Wheat			
Maize			
Horticulture			
Mango			
Citrus			
Guava			
Sea water intrusion NA			

## 2.4 Extreme events: Heat wave / Cold wave/Frost/ Hailstorm /Cyclone

Extreme event	Suggested contingency measures					
type	Seedling / nursery stage	Vegetative stage	Reproductive stage	At harvest		
Heat Wave	,			•		
Maize	Sowing of spring maize should not be delayed after 15 February since it will results in yield loss due to high temperature.		Spread the mulching material in the standing maize crop in the last week of August to avoid moisture stress			
Horticulture						
Crop1 (specify)	Apply frequent and light irrigations					
Cold wave						
Wheat	To late sown wheat, apply second dose of N with first irrigation.					
Mustard	To save the crop from frost damage, apply irrigation.					
Horticulture						
	The growers are advised to adopt the measures to save their valuable fruit trees from drought, windstorm and sun injury.					
Frost						
Horticulture						
Tomato	Complete transplanting of tomato seedling in the first fortnight of this month. (end of November  Provide Sarkanda/kahi/Rice straw to save the plants from frost. Dwarf tomato varieties					

	cane be saved from frost injury with 100 gauge thick white plastic bags of 35 x 25 cm size. Twenty five kg bags are sufficient for an acre and these can be used for 2 to 3 years.	
Potato		To save the potato crop from frost damage use the sprinkler irrigation and give light irrigation through sprinkler during frosty nights
Hailstorm		
Crop1		
Horticulture		
Crop1 (specify)		
Cyclone	NA	

### 2.5 Contingent strategies for Livestock, Poultry & Fisheries

### 2.5.1 Livestock

	Suggested contingency measures			
	Before the event	During the event	After the event	
Drought				
Feed and fodder availability	As the district is occasionally prone to drought the following measures to be taken to ameliorate the fodder deficiency  Avoid burning of wheat/paddy straw  Establishment of fodder bank at village level with available dry fodder (paddy /wheat straw)  Increase area under perennial fodder cultivation with high yielding Hybrid Napier varieties.	Harvest and use biomass of dried up crops (paddy maize, wheat, barley, soybean, mungbean etc.,) material as fodder Utilizing fodder from fodder bank reserves. Utilizing stored silage/hay. Transporting complete feed/fodder and dry roughages to the affected areas. Concentrate ingredients such as grains, brans, chunnies & oilseed cakes, low grade grains etc.	Training/educating farmers for feed & fodder storage.  Maintenance / repair of silo pits and feed/fodder stores.  Encourage progressive farmers to grow multi cut fodder crops of sorghum/bajra/maize (UP chari, MP chari, HC-136, HD-2, gaint bajra, L-74, K-	

	Conservation of maize green fodder as silage Sowing of cereals (Sorghum/Bajra) and leguminous crops (Lucerne, Berseem, Horse gram, Cowpea) during North- East monsoon under dry land system for fodder production  Encourage fodder production with maize, jowar, bajra, cowpea, makkchari, barseem, jawi, rayi grass, Lucerne and Japense grass  Processing & storage of feed/fodder and roughages in the form of complete feed/blocks.	unfit for human consumption should be procured from Govt. Godowns for feeding as supplement for high productive animals during drought  Continuous supplementation of mineral mixture to prevent infertility.  Encourage mixing available kitchen waste with dry fodder while feeding to the milch animals	677, Ananad/African Tall etc., Supply of quality fodder seed (multi cut sorghum/bajra/maize varieties) and fodder slips of Napier, guinea grass well before monsoon Replenish the feed and fodder banks
Drinking water	Adopt various water conservation methods at village level to improve the ground water level for adequate water supply.  Identification of water resources  Desilting of ponds  Rain water harvesting and create water bodies/watering points (when water is scarce use only as drinking water for animals)  Construction of drinking water tanks in herding places/village junctions/relief camp locations  Community drinking water trough can be arranged in shandies /community grazing areas	Adequate supply of drinking water.  Restrict wallowing of animals in water bodies/resources  Add alum in stagnated water bodies	Watershed management practices shall be promoted to conserve the rainwater. Bleach (0.1%) drinking water / water sources  Provide clean drinking water
Health and disease management	Procure and stock emergency medicines and vaccines for important endemic diseases of the area  All the stock must be immunized for endemic diseases of the area  Surveillance and disease monitoring network to be established at Joint Director (Animal Husbandry) office	Carryout deworming to all animals entering into relief camps  Identification and quarantine of sick animals  Constitution of Rapid Action Veterinary Force  Performing ring vaccination (8 km radius) in case of any outbreak	Keep close surveillance on disease outbreak.  Undertake the vaccination depending on need  Keep the animal houses clean and spray disinfectants

	in the district  Adequate refreshment training on draught management to be given to VAS, Jr.VAS, LI with regard to health & management measures  Procure and stock multivitamins & area specific mineral mixture	Restricting movement of livestock in case of any epidemic  Tick control measures be undertaken to prevent tick borne diseases in animals  Rescue of sick and injured animals and their treatment  Organize with community, daily lifting of dung from relief camps	Farmers should be advised to breed their milch animals during July-September so that the peak milk production does not coincide with mid summer
Floods			
Feed and fodder availability	In case of early forewarning (EFW), harvest all the crops (paddy/wheat/barley/maize/ soybean/mungbean etc.) that can be useful as feed/fodder in future (store properly)  Keeping sufficient of dry fodder to transport to the flood affected villages  Don't allow the animals for grazing if severe floods are forewarned  Keep stock of bleaching powder and lime  Carry out Butax spray for control of external parasites  Identify the Clinical staff and trained paravets and indent for their services as per schedules  Identify the volunteers who can serve in need of emergency  Arrangement for transportation of animals from low lying area to safer places and also for rescue animal health workers to get involve in rescue operations	Transportation of animals to elevated areas Proper hygiene and sanitation of the animal shed In severe storms, un-tether or let loose the animals Use of unconventional and locally available cheap feed ingredients for feeding of livestock. Avoid soaked and mould infected feeds / fodders to livestock Emergency outlet establishment for required medicines or feed in each village Spraying of fly repellants in animal sheds	Repair of animal shed Bring back the animals to the shed Cleaning and disinfection of the shed Bleach (0.1%) drinking water / water sources Encouraging farmers to cultivate Short-term fodder crops like sunhemp, Lucerne, berseem, maize etc.,. Deworming with broad spectrum dewormers Proper disposable of the dead animals / carcasses by burning / deep burying (4-8 feet) with lime powder (1kg for small ruminants and 5kg for large ruminants) in pit Drying the harvested crop

			material and proper storage for use as fodder.		
Cyclone	Not applicable				
Cold wave	Covering all the wire meshed walls / open area with gunny bags/ polyethylene sheets (with a mechanism for lifting during the day time and putting down during night time)	Allow for late grazing between 10 AM to 3 PM during cold waves  Add 25-50 ml of edible oil in concentrates and fed to the animal during cold waves  In severe cases, put on the heaters at night times  Apply / sprinkle lime powder in the animal shed during cold waves to neutralize ammonia accumulation	Feed the animals as per routine schedule Allow the animals for grazing (normal timings)		
Heat wave	Arrangement for protection from heat wave  i) Plantation around the shed  ii) H <sub>2</sub> O sprinklers / foggers in the shed  iii) Application of white reflector paint on the roof  iv) Thatched sheds should be provided as a shelter  to animal to minimize heat stress	Allow the animals early in the morning or late in the evening for grazing during heat waves  Feed green fodder/silage / concentrates during day time and roughages / hay during night time in case of heat waves  Put on the foggers / sprinkerlers/fans during heat weaves in case of high yielders (Jersey/HF crosses)  In severe cases, vitamin 'C' and electrolytes should be added in H <sub>2</sub> O during heat waves.	Feed the animals as per routine schedule Allow the animals for grazing (normal timings)		
Insurance	Encouraging insurance of livestock	Listing out the details of the dead animals	Submission for insurance claim and availing insurance benefit  Purchase of new productive animals		

## 2.5.2 Poultry

	Suggested contingency measures			
	Before the event	<b>During the event</b>	After the event	
Drought				
Shortage of feed ingredients	Storing of house hold grain like maize, broken rice, barley etc, Culling of weak birds	Supplementation for productive birds with house hold grain Supplementation of shell grit (calcium) for	Supplementation to all the birds	
		laying birds		
Drinking water	Rain water harvesting	Sanitation of drinking water	Give sufficient water as per the bird's requirement	
Health and disease management	Culling of sick birds.  Deworming and vaccination against RD	Mixing of vit. A, D, E, K and B-complex including vit C in drinking water	Hygienic and sanitation of poultry house	
	and fowl pox		Disposal of dead birds by burning / burying with line powder in pit	
Floods				
Shortage of feed ingredients	In case of EFW, shift the birds to safer place Storing of house hold grain like maize, broken rice, bajra etc, Culling of weak birds	Use stored feed as supplement Don't allow for scavenging	Routine practices are followed	
Drinking water	Provide clean drinking water	Sanitation of drinking water	Sanitation of drinking water	
Health and disease management	In case of EFW, add antibiotic powder in drinking water to prevent any disease	Sanitation of poultry house Treatment of affected birds	Disposal of dead birds by burning / burying with line	

	outbreak	Prevent water logging surrounding the sheds Assure supply of electricity Sprinkle lime powder to prevent ammonia accumulation due to dampness	powder in pit Disposal of poultry manure to prevent protozoal problem Supplementation of coccidiostats in feed Vaccination against RD
Cyclone	Not a cyclone prone district.		
Heat wave and cold w	vave		
Shelter/environment management	<b>Heat wave:</b> Provision of proper shelter with good ventilation	In severe cases, foggers/water sprinklers/wetting of hanged gunny bags should be arranged  Don't allow for scavenging during mid day	Routine practices are followed
	Cold wave: Provision of proper shelter Arrangement for brooding Assure supply of continuous electricity	Close all openings with polythene sheets In severe cases, arrange heaters Don't allow for scavenging during early morning and late evening	Routine practices are followed
Health and disease management	Deworming and vaccination against RD and fowl pox	Supplementation of house hold grain Provide cool and clean drinking water with electrolytes and vit. C In hot summer, add anti-stress probiotics in drinking water or feed	Routine practices are followed

## 2.5.3. Fisheries/ Aquaculture

	Suggested Contingency measures		
	Before the event	During the event	After the event
1. Drought			
A. Capture			
Marine	-	-	-
Inland			
(i) Shallow water depth due to	I) Critical analysis of long range	i) Use stored water.	i) Need based monitoring through
insufficient rains/inflow	forecast data.	ii) Use surface water flow.	research plan.
	ii) Storage of water.	iii) Divert water from unutilized areas.	ii) Intensive afforestation program.
	iii) Afforestation program.	iv) Utilize canal water.	iii) Augmentation of surface water
	iv) Conservation of	v) Aeration of water in	flow.
	rivers/reservoir/ponds.	ponds/reservoirs.	iv) Strengthening of water reservoirs.
	v) Re-excavation of local canals and		v) Rain water harvesting.
	reservoirs.		vi) Compensation claims.
			vii) Prepare vulnerability map and
			place it to management committee.
(ii) Changes in water quality	i) Prohibit dumping of solid, liquid	i) Use disinfectants and therapeutic	i)Need based research data should be
	and waste in water sources.	drugs.	generated on water quality.
	ii) Preparedness with stocks of	ii) Adoption of bio-remedial measures	ii) Dumping of solid, liquid and waste
	chemicals, disinfectants and		in water bodies should be stopped
	therapeutic drugs.		through enactment of legislation.
(iii) Any other			
B. Aquaculture			

(i) Shallow water in ponds due to	) Critical analysis of long range	i) Use stored water.	i) Need based monitoring through
insufficient rains/inflow	forecast data.	ii) Use surface water flow.	research plan.
	ii) Storage of water.	iii) Divert water from unutilized areas.	ii) Intensive afforestation program.
	iii) Afforestation program.	iv) Utilize canal water.	iii) Augmentation of surface water
	iv) Conservation of	v) Aeration of ponds.	flow.
	rivers/reservoir/ponds.		iv) Construction of water reservoirs.
	v) Re-excavation of local canals and		v) Adoption of rain harvesting
	reservoirs.		methods.
			vi) Compensation claims.
			vii) Prepare vulnerability map and
			place it to management committee.
(ii) Impact of salt load build up in	i) Prohibit dumping of solid, liquid	i) Use disinfectants and therapeutic	i)Need based research data should be
ponds/Changes in water quality	and waste in water sources.	drugs.	generated on water quality.
	ii) Preparedness with stocks of	ii) Adoption of bio-remedial measures	ii) Dumping of solid, liquid and waste
	chemicals, disinfectants and		should be stopped through enactment
	therapeutic drugs.		of legislation.
(iii) Any other	-	-	-
2. Flood			
A. Capture			
Marine	-	-	-
Inland			
(i) Average compensation paid due to	i) Be prepared to evacuate at a short	i) Human evacuation from the area.	i) Arrangement for rescue and
loss of human life	notice.	ii) Coordination of assistance.	casualty care.
	ii) Preparation of flood control action	iii) Damage and need assessment.	ii) Arrangement for burial control
	, · · · · · · · · · · · · · · · · · · ·		_

	iii) Warning dissemination and	supplies.	iii) Restoration of essential services,
	precautionary response.	v) Immediate help delivery.	security and protection of property.
	iv) Formation of flood management		iv) Support to rehabilitation, logistics,
	committee.		training and awareness build up &
	v) Enhancement in coping		testing and updating the plan.
	capabilities of common people.		v) Insurance and compensation claim.
	vi) Insurance for the life of		
	people/fishermen.		
(ii) No. of boats/nets damaged	i) Annual repair of boats/nets and	i) Coordination of assistance	i) Education and training for the repair
	gears.	iii) Immediate management of relief	of boats/nets and gears.
	ii) Insurance of boats/nets/gears.	supplies.	ii) Loss assessment & insurance claim.
		iv) Govt. support and compensation.	
(iii) No. of houses damaged	i) Education and training for the	i) Arrangement of temporary shelters	i) Loss assessment & insurance claim.
	repair of houses.	for homeless people.	ii) Govt. assistance claim.
	ii) Store raw material for emergency	i) Damaged house enumeration and	
	repair of houses.	need assessment.	
	iii) House insurance.	ii)Coordination of assistance.	
		iii) Immediate management of relief	
		supplies.	
(iv) Loss of stock	i) Keep boats, nets/gears ready for	i) Search/locate the stock/input.	i) Locate backup stocks and verify its
	emergency use.	ii) Mobilize local people for	usability time.
	ii) Store fuels, food/other item	protection.	ii) Follow flood control management
	iii) Develop flood control	iii) Hire stock/inputs from distant	plan.
	management plans.	areas/company/ farmers who are not	iii) Notify utilities of the critical
	iv) Stock material insurance.	affected by flood.	demand about loss of stock and inputs.
			iv) Loss assessment & insurance

			claim.
(v) Changes in water quality	i) Provision to stop/close the	i) Do not use contaminated water	i) Need based research data should be
	effluent/sewerage discharge point in	ii) Proper preparation and	generated to maintain water quality,
	water bodies	management through emergency	iii) Dumping of solid, liquid and waste
	ii) Store chemicals, disinfectants and	aeration.	should be stopped through enactment
	therapeutic drugs.	iii) Use appropriate amount of	of legislation.
	iii) Develop flood control	disinfectants, chemicals and	iv) Contact Govt. and industrial
	management plan.	therapeutic drugs.	organization for immediate remedy
		iv) Immediate support of Govt.	and cleaning of the water bodies.
		/industrial organizations for	v) Regular water monitoring and bio-
		maintaining the purity and quality of	monitoring of water bodies for
		water bodies.	formulation of management plan
		v) Need based bioremediation	
(vi) Health and disease	i) Advance planning and	i) Prompt action or immediate	i) Laboratory diagnosis of diseased
	preparedness.	removal of disease causing agents/	fish, generation of data about type or
	ii) Store chemicals, disinfectants and	dead fish, followed by sterile or	kind of disease spread.
	therapeutic drugs.	landfill disposal.	iv) Eradicating the disease where
	iii) Stock sufficient stores of	ii) Use appropriate amount of	possible.
	medicines.	disinfectants, chemicals and	v) Follow up surveillance and
		therapeutic drugs.	monitoring after disease outbreak.
		iii) Emergency aeration or splashing	vi) Bio-monitoring and maintaining
		in water bodies.	water quality.
			vii) Need based research data should
			be generated.
			vii) Loss assessment & insurance
			claim.

B. Aquaculture			
(i) Inundation with flood water	i) Proper facility construction for	i) Arrangement for evacuation.	i) Support to rehabilitation, logistics,
	ponds and its stock safety.	ii) Arrangement for rescue and	training and awareness build up &
	ii) Development of flood control	casualty care.	testing and updating the plan
	management plan.	iii) Arrangement for burial control	ii) Reallocate fish to maintain
	iii)Preparedness with emergency	room.	appropriate biomass so that waste
	backup equipment on site.	iv) Restoration of essential services,	assimilation capacity of pond is not
	iv) Stock insurance.	security and protection of property.	exceeded.
	v) Preventive measures against entry	v) Coordination of assistance.	iii) Reduce or cease feeding because
	of alien/wild organisms through	vi) Damage and need assessment.	uneaten food and fish waste decreases
	flood water.	vii) Immediate management of relief	the dissolved oxygen level.
		supplies.	iv) Strengthening of water
		viii) Release excess water from height	bodies/ponds.
		of T.	v) Loss assessment & insurance claim.
		viii) Lower the water level in culture	
		facilities.	
(ii) Water contamination and changes in	i) Store chemicals, disinfectants and	i) Do not use contaminated water.	i) To maintain water quality, need
water quality	therapeutic drugs	ii) Proper preparation and	based research data should be
	ii) Develop flood control	management through emergency	generated
	management plan	aeration (paddle wheel	ii) Dumping of solid, liquid and waste
		aerator/circulating aerator), that may	should be stopped through enactment
		improve water quality in affected	of legislation.
		areas.	iii) Immediate remedy and cleaning of
		iii) Use appropriate amount of	water bodies.
		disinfectants, chemicals and	iv) Regular water monitoring and bio-

		therapeutic drugs.	monitoring of water bodies for
		iv) Maintaining the purity and quality	formulation of management plan.
		of water bodies.	
		iv) Need based bioremediation.	
(iii) Health and diseases	i) Advance planning and	i)Identification of type of disease	i) Laboratory diagnosis of diseased
	preparedness.	outbreak, immediate removal of	fish, generation of data about type or
	ii) Store chemicals, disinfectants and	disease causing agents/ dead fish.	kind of disease spread.
	therapeutic drugs.	ii) Use appropriate amount of	ii) Eradicating the disease.
	iii) Stock sufficient emergency	disinfectants, chemicals and	iii) Follow up surveillance and
	medicines.	therapeutic drugs.	monitoring.
		iii) Determination of nature and speed	iv) Proper disposal of dead fish.
		of transmission of diseases.	v) Loss assessment & insurance claim.
		vi )Emergency aeration or splashing	
		in water bodies.	
(iv) Loss of stock and input (feed,	i) Keep the stock/input at safe place	i) Search/locate the stock/input.	i) Strengthening of stocks.
chemicals)	for emergency purpose.	ii) Purchase/hire valuable stock/inputs	ii) Assessment of total loss.
	ii) Store fuels, food/other item.	from distant areas not affected by	iii) Insurance claims.
	iii) Develop flood control	flood.	
	management plan.		
	iv) Stock material insurance.		
(v) Infrastructure damage (pumps,	i) Educate and provide training for	i) Notify utilities of the critical	i)Damaged infrastructure enumeration
aerators, huts etc)	the repair of infrastructure.	demand.	and need assessment.
	ii) Follow flood control management	ii) Coordination of assistance.	ii) Locate backup equipment and
	plan.	iii) Immediate management of relief	verify its operation.
	iii) Store raw materials for repairing	supplies.	iii) Repair of damaged infrastructure.
	of pumps aerators, huts etc.		iv) Loss assessment & insurance

	iv) Infrastructure insurance.		claim.
(vi) Any other			
3. Cyclone / Tsunami	Not a cyclone affected district.		
A. Capture	-	-	-
Marine	-	-	-
(i) Average compensation paid due to loss of fishermen lives	-	-	-
(ii) Avg. no. of boats/nets damaged	-	-	-
(iii) Avg. no. of houses damaged	-	-	-
Inland	-	-	-
B. Aquaculture	-	-	-
(i) Overflow / flooding of ponds	-	-	-
(ii) Changes in water quality (freshwater/brackish water ratio)	-	-	-
(iii) Health and disease	-	-	-
(iv) Loss of stock and input (feed, chemicals etc.)	-	-	-
(v) Infrastructure damage (pumps, aerators, shelters/huts etc.)	-	-	-
(vi) Any other	-	-	-
4. Heat wave and cold wave			
A. Capture			
Marine	-	-	-
Inland	i) Stay aware of upcoming	i) Monitor fishing sites frequently to	i) Intensive afforestation program for
	temperature changes.	ensure that they are not affected by	reducing heat waves.
	ii) Arrange the aerators.	heat or cold waves.	ii) Collect basic weather data and
	iii) Ensure sufficient water level in	ii) Use dark materials to cover the	incidence of extreme and physical

	water bodies.	water bodies during excessive heat	data of water bodies, water chemistry
	vi) Formulate strategic fishing	waves.	and seasonal changes, plankton profile
	management during the heat/ cold	iii) Stay hydrated by drinking plenty	and seasonal blooms, topography and
	waves.	of fluids during fishing/field work.	soil composition.
	v) Tree plantation around fish ponds	iv) Educating the farmers through	iii) Gather information about history
		electronic or print media	of catch per unit effort as well as fish
			yield rate during heat wave and cold
			wave and accordingly simulate future
			plan for sustainable fishing.
			v) Loss assessment & insurance claim.
B. Aquaculture			
(i) Changes in pond environment (water quality)	i) Listen to local weather forecasts	i) Monitor fishing sites frequently to	i) Intensive afforestation program for
	and stay aware of upcoming	ensure that they are not affected by	reducing heat waves.
	temperature changes.	heat or cold waves.	ii) Collect basic weather data and
	ii) Arrange the aerators.	ii) Use dark materials to cover the	incidence of extreme and physical
	iii) Ensure sufficient water quantity	water bodies during excessive heat	data of water bodies, water chemistry
	in water bodies.	waves.	and seasonal changes, plankton profile
	iv) Formulate strategic fishing	iii) Stay hydrated by drinking plenty	and seasonal blooms, topography and
	management for the heat /cold	of fluids during fishing/field work.	soil composition.
	waves.	vi) Adopt proper care and	iii) Gather information about history
	v) Tree plantation around fish ponds	management during the fishing period	of catch per unit effort as well as fish
		of cold/heat wave like keeping stock	yield rate during heat wave and cold
		of drinking water and extra cloths.	wave and accordingly simulate future
		vi) Educating the farmers through	plan for sustainable fishing.
		electronic or print media	vi) Loss assessment & insurance
			claim.

(ii) Health and disease management	i) Advance planning and	i)Identification of type of disease	i) Laboratory diagnosis of diseased
	preparedness.	outbreak, immediate removal of	fish, generation of data about type or
	ii) Store chemicals, disinfectants and	disease causing agents/ dead fish.	kind of disease spread.
	therapeutic drugs.	ii) Use appropriate amount of	ii) Eradicating the disease.
	iii) Develop heat/ cold wave control	disinfectants, chemicals and	iii) Follow up surveillance and
	management plan.	therapeutic drugs.	monitoring.
	iv) Stock sufficient emergency	iii) Determination of nature and speed	iv) Proper disposal of dead fish.
	medicines.	of transmission of diseases.	v) Loss assessment & insurance claim.
		vi )Emergency aeration or splashing	
		in water bodies	
(iii) Any other	-	-	-
