SCHEDULE OF REQUIREMENTS & FULL TECHNICAL SPECIFICATIONS WITH COMPLIANCE
(Should be submitted duly printed on the letterhead of the bidder separately for each item and option)

TECHNICAL SPECIFICATIONS - AUTOMATED RAINOUT SHELTER FACILITY

Automated Rainout Shelter facility:

Rain out Shelter of 900 Sq. m. area (450sq. m covered planted area and 450 sq. m hanger area). The roof and sides shall be covered with 8 mm thick Polycarbonate sheet. The sheet fixed shall have provision of 100% leak proof arrangement against entry of rain water.

Structure model: Motorized movable model with a total Area: 900Sq.m. Suitable for withstanding wind load of 170-180 Kmph wind load. Frame work of suitable sized trusses, column purling vertical supports, appropriately fabricated for withstanding structural design loading. A stress-strain validated design with full material specifications and design calculation for meeting the structural requirement shall have to be furnished to CRIDA for approval before start of turnkey work of the facility at site.

Structure size/ growing area: Net sown area / structure is 450 Sq.m

Span Size: - as per submitted design for approval by CRIDA.

Shape: Dome/skylight

Railing: The structure will race on parallel rail. Rail should be made of high quality rust free steel rail.

Civil work for railing system: A masonry stone/brick wall of up to 1.5 feet above ground and 3.0 feet below ground with both sides cement plastered running all round the structure. A suitable RCC foundation and RCC beams (Reinforced cement concrete 1:2:4) shall be designed and constructed to house the rail structure for movement of rainout shelter facility 45cm above the ground level.

Cladding structure and materials: Complete roof structure and pillars made of corrosive, humidity resistant ISI standard GI pipe. Top covered with 8mm thick triple walled U.V. stabilized polycarbonate sheet with 80% light transmission: The poly carbonate sheet shall have multi wall impact resistant, hail resistant, certified to DIN EN ISO-9001 and 14001 with 10 years guarantee light transmission. The poly carbonate sheets fixed with aluminum strip with gasket, all edges/joints should be blocked with silicon sealant to avoid leakages. The sheet on sides should be fixed in manner to escape the rains from sides. The front and back of the structure should be rollable.

Drainage channel: Drainage channel (15cm x 15 cm) should be made along the foundation wall to avoid the rain water off the experimental area leaving 1 m and duly plastered on cement and brick work.

Electric work and plumbing: All electric work including switch panel and plumbing work should be fitted as required.

Driven Mechanism: The structure should be equipped with rain sensors for automatic movement. The speed for movement should be controlled. The movement should be by power operated geared electric motor with facilitation of electric/electronic panel facility. Rain sensor must be reliable with 5 year warranty and hassle free operation. The motor gear lock system should be detachable to allow manual electric movement. In case of power failure a suitable capacity stand by DG set is also to be installed.

Automatic Motorized Rolling mechanism: Motorized rolling mechanism on wheels on rails with arrangements for easy movement, quick locking and unlocking, latches and safety measurements while operating. Housing of the motor and other electrical components in rain protected box/shade for longer operation. The complete motorized rolling mechanism including control panel motor drive etc. shall have a redundant control and backup drive system so that moving facility shall keep working with standby arrangement even after failure of primary drive mechanism.

Safety system: Accidental backup in case of motor failure, automatic timing control system for upward & downward movement, changeover arrangement, cutoff device in case of wrong movement, locking and unlocking with gear system etc.

Rolling wheels: Steel wheels with high stress bearing (Taper roller bearing/ Ball bearing with proper lubrication system).

Light Sensor with data logger this technology advancement makes rainout shelter aware of their environment, the rainout shelter with rain sensor system with an unrivalled set of automation procedures.

Power Back up: The Rainout shelter drive and control mechanism shall be fed from three phase 415 Volts 50Hz online UPS of required rating with minimum 30 minutes battery back up on full load. Additionally a 10KVA Echo green DG set for power backup is also to be installed.

Warranty: Post Installation onsite warranty for one year. AMC rates are also to be quoted along with financial bid for three years.

Conditions: All units complete in all respects as indented above should be installed at the identified site at **ICAR CRIDA HRF**. The structure will be equipped with all the necessary facilities on turnkey basis. The firm will also be expected to undertake complete maintenance during warranty period.

To be eligible for consideration an firm should have:

1. The firm must have the ISO 9001:2014 certification
2. Civil & structural drawing shall be attached with tender.
3. Organization shall submit the details of motorized mechanism/sensors/ with Make/ Brand.
4. Capacity of the firm to execute the task would be ascertained on the basis of their executed projects of similar nature.
5. The turnover in the construction of green house (two crore) and audited financial report of last three years (2012-13 to 2014-15) must be enclosed.

Note: The photographs of different models fixed at various institutes with authenticated proof may be submitted.
